

Speed Radar Gun

SVR (Surface Velocity Radar)

Our SVR surface velocity radar gun is available for either hire or sale. The SVR is a model used for measuring water speed across the world. Fitted with a small LCD display, the user can point at flowing water, pull the trigger and it will continuously track and measure the water flow rate in real time in either knots, feet per second or meters per second.

The SVR radar gun is available for either hire or sale. Designed for use within the environmental and sewage treatment works area, it is designed to measure water flow. It can be used for measuring stream, rivers or any other body of moving water in real time and the speeds are displayed on the built in LCD Display. The intelligent built in engine can automatically detect the users angle and auto correct to give a true and accurate speed.

Radar Module –

- Make – Decatur SI-3 Antenna
- Sensor – K-Band
- Units – Knots, FPS, MPS
- Distance – 20-100ft
- Port for data collection to laptop

Power –

- 7.2v Rechargeable System
- Optional 12v in car charging
- Battery Life – 4-6 hours
- Fast recharging
- Low Voltage alert system.

Dimensions –

- Length – 250mm
- Width – 180mm
- Weight – (approx.) 1.5kg

Security –

- Optional Hard-Shell carry case

Why choose Roadside Technologies VMS:

- ✓ UK and EU authorised distributor for the SVR
- ✓ 2 Year Warranty as standard
- ✓ Low failure rate with no moving parts
- ✓ Calibration packages available
- ✓ Long term lease options available
- ✓ Comes complete with 12 months calibration certificate
- ✓ Optional Hard-Shell carry case available
- ✓ Operational within seconds of switching it on
